PRODUCTS

FIBRAFORM[®]

DESCRIPTION

FIBRAFORM is a MDF board grooved on one of its sides in order for it to adapt to curved shapes.

Classification E1; low emission of formaldehyde.

CHARACTERISTICS

- The grooves are rectangular, 2mm wide, and the depth of the grooves can reach between 1.4 and 1.8 mm, measures from the other side of the board..
- Fibraform is compatible with any type of decorative coverings, namely natural veneers, PVC, paint or varnish.

ADVANTAGES

Easy to handle and to adapt to curved shapes.
FIBRAFORM is perfectly adapted to combine with other flexible materials.

APPLICATIONS

It can be perfectly adjusted to curved forms for:

- Covering columns and walls.
- Support furniture (flower vases, sinuous racks, curved counters).
- Coffins.

Other suggestions: use FIBRAFORM with the grooves outwards, as a decorative element to cover your office/shop walls.

NEWS

FIBRACOLOUR FORM is the new expression of fibreboard that will enhance even more the quality of your creative work.

Depending on the desired effect for each application, you may apply waxes, lacquers, or transparent varnish that will strengthen the intensity and uniformity of your colours.

By using natural veneer overlays over FIBRACOLOUR FORM, a contrast can be created between the surface and the edges of the product.
